

BENEFITS FOR Subscribing States

Designing innovative science assessment demands real expertise. The process can be costly, time-consuming, and requires significant resources. The New Meridian Science Exchange is the quickest and most cost-effective way to obtain NGSS-aligned assessments. This is done through a full-service partnership that connects states to high-quality science assessment content, backed by science assessment experts and an industry leading framework.

Subscribing states can elevate the quality of science assessment at a reduced cost by licensing test items from a secure bank, with confidence that all items have been vetted for fairness, bias, sensitivity, multi-dimensional performance, sense-making and technical quality.

Subscribing states will:

Remove the high cost and operational barriers to three-dimensional science assessment.

Gain access to the highest-quality science content at a reasonable cost.

Accelerate testing timelines to realize immediate benefits.

Ensure coherence to science curriculum.

Receive ongoing support from an expert partner to meet specific blueprint needs.

Retain the flexibility to use preferred administration and scoring vendor with QTI v2.2 compliant content.
